DETAILED ACTION

Inventorship

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Specification

2. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art figure 3 (APA figure 3) in view of Onodera (US 5,708,356).

APA figure 3 disclose an output transistor (1), control circuit (4), a current detection circuit (R1, 6), and protection circuit (7, 8, R2).

However, APA figure 3 does not disclose voltage detection and a multiplier circuit.

Onodera teaches that it is well known to use a multiplying circuit to multiply a voltage signal and a current signal, derived from voltage and current detection circuits, in order to derive a power calculation to thereby stabilize the circuit.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the APA figure 3 to include a voltage sense circuit and a multiplier in order to multiply the voltage and current to calculate a power measurement to aid in controlling the circuit as taught by Onodera.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 5,939,867 Capici et al disclose a low consumption voltage regulator with gain control.

US 5,642,034 Amano discloses summing current and voltage to control a circuit.

US 5,191,278 Carpenter discloses summing a voltage and current to control a circuit.

US Rodek et al discloses constant power regulation of a circuit.
